

National Coordination Mechanism (NCM) for Earth Observations

- Framework to enhance coordination and collaboration among various stakeholders (i.e. government agencies, the private sector, civil society, and NGO's) to deliver solutions to identified EO national priorities.

Data integration and standardization

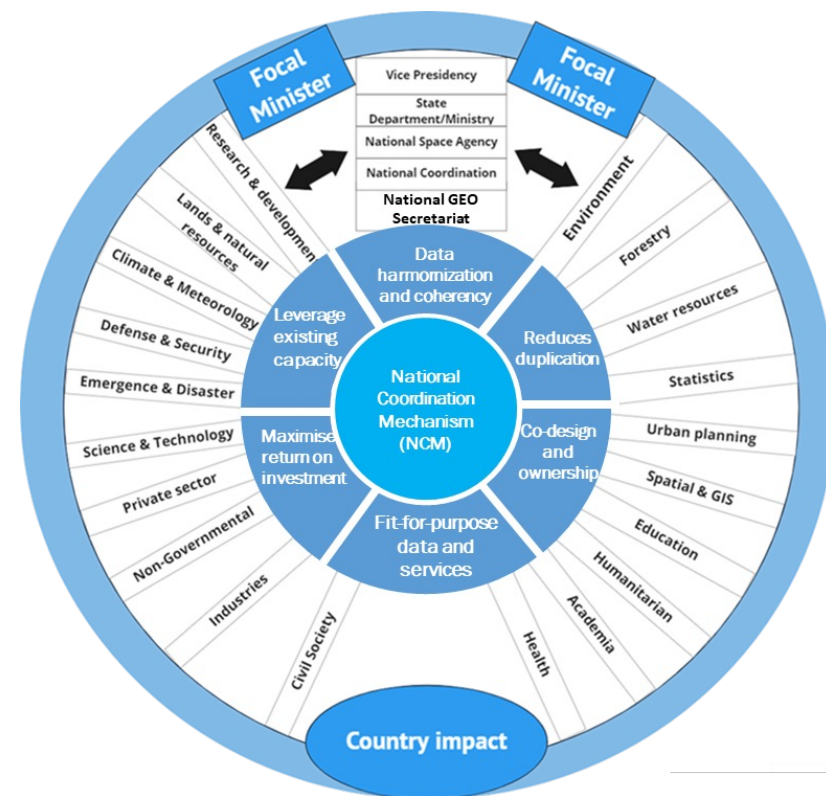

Data accessibility

Capacity building

Interdisciplinary collaboration

Policy and decision support

Resources optimization

Transformative GEO post-2025 → NCM as one of the means → to guarantee equity, good governance and efficient operational model → no 1model4all, maturity-particularities dependent, dynamic → local EO ecosystems → strong bidirectional GWP – NCM interaction also in view of the engagement priorities → inwards and outwards views → interfacing with regional GEOs and intra-national structures i.e. regions, cities

Increase national engagement to amplify local impact
